

Advanced Satellite Tracking for Currency Recovery

The complete CashTrack™ system:

Covertly disguised GPS tracking device

Magnetic Docking Station
for centralized storage.

Magnetic Cash Drawer Insert
for continuous placement in a teller drawer.

Comprehensive web-based tracking interface

CashTrack™ is an advanced, self-contained satellite tracking system that is covertly disguised as stacked currency. The easy to use tracking system allows banks, financial institutions and commercial operations to track and apprehend unsuspecting thieves within minutes of a robbery.

No Charging... No Software... No Hassle!

CashTrack™ can be deployed directly from its shipping box to a teller drawer or centralized docking station within seconds of opening the box. All you need to do is position the included magnetic insert into any standard teller drawer and place the CashTrack™ GPS on top. That's it!

How it works

CashTrack™ arrives at your branch completely ready for operation. No Charging... No Software... No Hassle!

The CashTrack™ system includes a magnetic docking station and magnetic cash drawer insert. These allow you the flexibility to store CashTrack™ in either a centralized location for daily deployment or permanently in your tellers' cash drawers.

Within seconds of opening the box, your CashTrack™ is ready to use. All you need to do is position the included magnetic insert into any standard teller drawer and place the CashTrack™ GPS on top. That's it!

Once CashTrack™ is positioned on top of the magnetic plate in a cash drawer, tellers simply follow standard daily procedures for their branch.

If no robbery is attempted during the shift, the cash drawer is typically returned to a secure centralized vault. This process can be repeated for 24 months without ever servicing the CashTrack™ GPS device.

In the event of a robbery, the teller will "clean out" the cash drawer and give all currency as well as the covert CashTrack™ unit to the thief.

Once the CashTrack™ GPS leaves a preset, user-defined area (also called a geo-fence), the unit will automatically send multiple e-mail or telephone messages alerting to the security breach.

After breaching the bank perimeter, the CashTrack™ system begins to transmit and record detailed location reports at programmable intervals down to every 15 seconds. This real-time tracking can instantly be viewed through any web enabled computer or mobile device.

Unique features of the CashTrack™ system

- No charging...
No software...
No hassle
- Real-time tracking in 15-second intervals
- Custom defined, geo-fence boundaries
- Automated e-mail and phone notifications in the event of a breach
- Advanced 3-D and aerial view mapping for real-time and historical tracking
- It works outdoors, inside buildings and even through metal*
