

## ARCOLOCK-7® SECURITY Keyed Locking Bags

Made exclusively for A. Rifkin Co., our seven-pin tumbler lock mechanism makes our secure transport bags the most reliable on the market when high security is required. All Arcolock-7® bags, except LCX bags, come standard with two keys that are factory sealed in a polyethylene envelope to provide security for the key system until the bags are used. Our lock safety feature prevents the key from being removed while the lock is in the open position, making it impossible to accidentally lock your key inside the bag. Widely used by banks and government agencies, Arcolock-7® bags feature four available keying options\*, or an LCX keyless option, with up to 3,000 independent key changes with no interchanges, and up to 2,000 master-key combinations in each series.

U.S. Patent No.  
3759073 and 5065602

\*all bags are keyed differently unless otherwise specified.

### Keyed Differently (included in Sac price)

Keyed differently, each bag has its own key, different from all others, with no interchanges.

### Keyed Alike (included in Sac price)

When Arcolock-7's are keyed alike, a single key pattern ("bitting") allows all key holders to open every bag in the system.

### Master-Keyed (Additional cost per Sac)

In master-keyed systems, each bag has its own key which is independent of other locks in the system. However, a single key opens all locks in that system.

### Keyed Alike Sets with Master Key (Additional cost per Sac)

Keyed alike sets are also available with a master key which will open each bag in all sets.

### LCX Key System (Additional cost per Sac)

For applications where individual bag users do not receive keys. In "Keyless" LCX systems, bags are issued unlocked with a leather insert strip secured around the plunger head to prevent accidental locking. Once filled, the user simply removes the strip, closes the zipper and depresses the plunger. The bag is then securely locked. This enables a single authorized keyholder to open all bags in the system without any other bag users requiring a key. It also allows any bag to be sent to any user, simplifying the redistribution process. Two keys to operate all locks in the system are provided for each new LCX bag series.

## KEYLESS SECURITY™ Patented Rifkin Exclusive!

Rifkin Keyless Security™ bags use uniquely numbered, single-use seals and a patented zipper chamber to provide documented evidence that the contents of the bag remain secure during storage and transport. All bags equipped with Rifkin's Keyless Security™ option provide clear evidence if the bag's contents have been compromised. The very presence of the Keyless Security™ chamber keeps most would-be "snoops" looking for an easier target.

### To Secure The Bag

- Insert all materials to be transported into the Keyless Security™ Bag.
- Fill in date, delivery location, and seal number on provided routing card. Insert card into the clear window which is accessible only through the interior of the pouch.
- Pull the zipper completely closed. Hold chamber lid at a 45° angle, push back and down until it snaps into place.
- To lock, insert seal's twin arrowheads into the two small rectangular openings and push until they click into place.

U.S. Patent No. 6533335

### To Open The Bag

- Verify that the seal number matches the documented number on the routing card. Confirm the seal has not been broken or tampered with during transport.
- To open, utilizing the indent under the red seal, lift seal until it breaks. Then using the second indentation, lift up the chamber lid, unzip bag. Make sure all seal pieces are removed. Remove contents and reuse pouch.

U.S. Patent No. 6533335
